

EHS Policy

Samsung Electronics shall contribute to protecting the earth and improving people's lives and be at the forefront of creating a sustainable society according to its business principle that prioritizes the environment, safety and health. The company shall put environmental protection and safety of all employees and clients first in its product development and manufacturing process

Strengthening The Global EHS Management System

It complies with domestic and international laws and agreements regarding the environment, energy, safety and health and faithfully applies and implements strict management standards in order to prevent environmental and safety accidents. It conducts training on the EHS management system so that all employees can understand and practice the EHS management system, and it discloses the EHS policy and business performance to internal and external interested parties.

Putting The Principle of Responsibility in Practice across The Entire Cycle of Products

It puts the principle of responsibility in action in purchase of raw materials, components and wrapping materials that have minimal environmental impacts and across the entire cycle of development, manufacturing, logistics, use and disposal of products in order to reduce use of resources and environmental pollution.

Developing an Eco-Friendly Production Process

It introduces optimal clean production technology to cut down chemical, energy and water use, encourage the reuse and recycling of waste materials and waste water and reduce pollutants.

Implementing Climate Change Policy

It views the crisis of climate change as a challenge for all to protect the earth and continuously strives to use more renewable energy, reduce greenhouse gas emissions and establish a low carbon ecosystem with the aim of combating climate change.

Creating a Safe Workplace

It creates a safety culture in which all employees engage to ensure a safe workplace and builds a zero-accident workplace by promoting employees' health and eliminating safety risks for the purpose of prevention of severe accidents.

In addition, it protects employees and residents from external risks (e.g., natural disaster, fire and infectious disease) and puts the emergency response system in place so that business activity can continue.

Forging Win-Win Partnership

It maintains a cooperative relationship with partners in compliance with the code of conduct and forms an eco-friendly business partnership by sharing the EHS management system and technology. Furthermore, it contributes to boosting the local economy through communication with residents.
