

Responsible Use Card

[Adapted from IBM's 5 Pillars](#)

Privacy: *What data (if any) does your project collect from people who use or view it, and how will you declare that information?* My AI-generated art for the competition doesn't collect any data, but I need to be careful not to use prompts that include real people's likenesses.

Explainability: *What AI tool(s) are you using in your project, and how do they work?* I'm using Midjourney to generate digital artwork for the competition. It takes prompts I write and creates images based on patterns it learned from millions of images in its training data.

Robustness: *What could go wrong?* The AI could generate inappropriate content or produce images too similar to existing works.

Fairness: *Who is it designed for, and could it exclude/harm anyone?* The viewers of the contest results will see it. The AI might have learned biases from its training data. If I'm creating art depicting people, certain groups might be stereotyped or underrepresented.

Transparency: *Do users know they're interacting with AI? Are you clear about what the AI can and cannot do? Could your AI tool's outputs violate copyright or closely resemble existing copyrighted work?* Since this is an AI art competition, it's clear my work is AI-generated, not traditionally painted or drawn, but I should credit which AI tool I used and be honest that I'm the prompt creator, and didn't make this by hand.
