

Inspiring Students. Empowering Educators. Driving Change.

Support student innovation and bring STEM to life in your classroom, while helping students create the change they want to see.

Who we are

For over 16 years, Samsung Solve for Tomorrow has invited educators to empower their students to use STEM as a force for good, equipping young people with the skills needed to shape the future of their communities and beyond.

From lesson integration to national visibility, Samsung Solve for Tomorrow is helping to make STEM education more inspiring, relevant, and rewarding through collaborative problem-solving.

How it works

Through the award-winning Samsung Solve For Tomorrow competition, middle and high school teachers across the country guide student teams in developing creative solutions to community challenges — while gaining access to resources, recognition, and prize opportunities.

Samsung Solve for Tomorrow

Samsung Solve for Tomorrow showed us all that even as high school students, you could have a positive impact, that if there's a problem in the community, you have the power to fix it."

— NATIONAL WINNER STUDENT

16 Years+
of innovation

68 Countries
represented

2.8 Million
youth participants

\$31 Million+
in technology and prizes
